

# Grounding Package for the Aaronia high-efficiency Shielding Fabric

## Application / Mounting:

To ground the Aaronia fabric it is necessary that you use this grounding package in order to comply with existing rules. Included in the package is a special plaited ground strap with various mounting material and detailed instructions. The ground strap should best be layed in the dado and connected to the Aaronia fabric in regular intervals. If need be, the strap can also be shortened or easily elongated with the use of the installed eyelet and several grounding packages.

In order to ground the shielding, a ground conductor is connected with one end of the mounted ground strap. The conductor is also to be attached to the potential equalization.
